

GREAT OCEAN ROAD
COAST & PARKS AUTHORITY

Nature's colour collection

Colour can make our world brighter, tell us the time of day and describe how we are feeling. In the environment, colours also help animals and plants find food and shelter to survive.

This activity asks you to explore the rainbow of colours found in nature. Maybe it's in your backyard, the bush, beach, schoolyard, or another outside space.

WHAT YOU NEED TO DO

- Draw, print or save to a phone or tablet the colour-wheel image on the next page to bring with you on your nature colour search.
- Add your own colours to find onto the last blank page.
- Pack something to take or draw pictures, write down examples and carry small items you can collect to add to your nature's colour collection pages.
- Head outside and see how many examples of the colours you can find!

HINTS AND TIPS

- Look under leaves, not just on top. You might find a different colour.
- Look high and low: some colours are hidden at ground level or up in trees.
- Lots of colours can be found on the one plant, animal, rock or other things.
- Visit different places: different environments can have different colours.

Colour-wheel

Draw, print or save the image below to your phone or tablet to bring with you as you search for these colours in nature.

Nature's colour collection

Draw, write or stick on a piece of what you find for each colour.

Pink	
Magenta	
Light Red	
Red	
Orange	
Dark Orange	
Grey	

Natures colour collection

Add your own colours or patterns to find in nature and add examples.
